FONE540

BYOD GOAT

Advanced Audio that Adapts to Any Meeting Space

Clear communication

The FONE540 offers premium audio with the latest technology that filters out disrupting background noises and eliminates frustrating dead spots caused by simultaneous talking. With AVer's newest technology, double-talk detection, you'll never have to worry about repeating yourself in an audio or video conference.

Flexible connectivity in any room

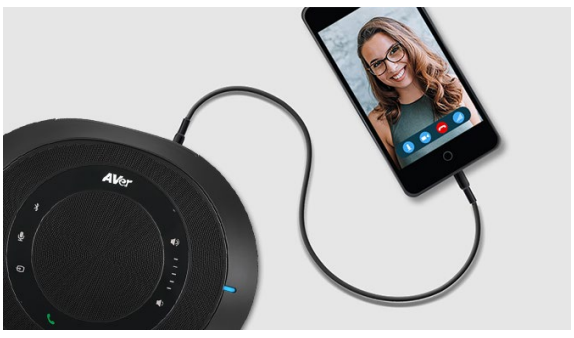
Users can expand the FONE540 by daisy-chaining additional microphones or up to two extra speakerphones to fit any meeting room type or conference table configuration. The FONE540 can adapt to any meeting room including personal workspaces, huddle rooms, and medium-to-large conference rooms.

Advanced noise suppression

No need to worry about additional distractions like dogs barking or construction sounds. The FONE540 speakerphone silences background noises like keyboard typing during a conference call and guarantees unmatched audio clarity.

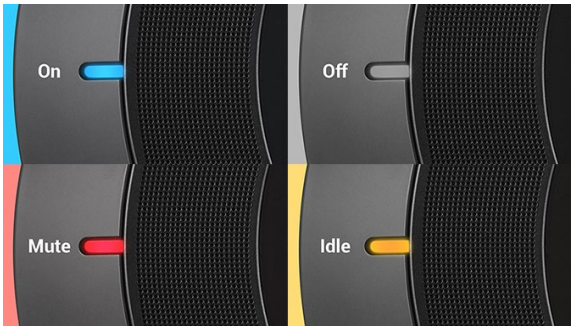
Three-way calling

When a remote third party wants to join the meeting, they can simply call a mobile phone plugged into the FONE540 speakerphone by a 3.5 mm line-in jack. It's a simple yet effective way to enjoy a meeting with superior audio quality.



Smart indicator lights clearly display the speaker status

With Smart LED indicators, everyone in the meeting room will know if the FONE540 is on or off, muted, or idle. The lights clearly display the speakerphone's status so you never have to wonder if you've hung up the call or not.Personalize the controller to improve productivity.



Zoom certified

Zoom users can upgrade from built-in laptop speakers or outdated speakerphones by integrating the FONE540's professional-grade audio performance into their remote collaboration setups. The FONE540 gives users enterprise-grade audio to run more efficient and productive meetings with crystal-clear interactive communication.
